

# **Final Project Proposal**

## **1. Project Description**

This project aims to analyze the LinkedIn Job Postings dataset to gain insights into current job market trends, hiring behavior, salary distribution, and skill demand across different industries. The dataset includes multiple related tables containing information about job postings, companies, job industries, required skills, employee counts, and job benefits.

The analysis will focus on understanding how companies hire, what skills are most demanded in the labor market, and how salaries vary across different job roles and industries. By integrating and analyzing these datasets, the project will identify patterns and relationships between companies, job postings, and required skills.

The final outcome of the project will be an interactive dashboard that provides clear visual insights into hiring trends, skill demand, and salary patterns, helping users better understand the dynamics of the job market.

## **2. Group Members & Roles**

- 1- Malak Alaa Abd ElGawad (Data Visualization)
- 2- Nahla Mohamed Amin (Data Visualization)
- 3- ايمن محمود السيد (Data Calculation)
- 4- زياد رجب عبد الفتاح سيد (Data Calculation)
- 5- Kareem Mostafa Rashad (Data Cleaning)

{Data Modeling phase we will do it together}

## **3. Team Leader**

Basmala Usama Shahat (Data Cleaning)

## **4. Objectives**

The main objective of this project is to apply the fundamental principles of data analysis, including data cleaning, data transformation, data modeling, and data visualization, to analyze the LinkedIn job postings dataset.

Through this process, the project aims to extract meaningful insights about hiring trends, required skills, salary distribution, and company hiring behavior. The analysis will help identify patterns in the job market and provide a clear understanding of employer requirements across different industries.

In addition, the project aims to present these insights through an interactive dashboard that allows users to easily explore and interpret the results.

## 5. Tools & Technologies

The following tools and technologies will be used in this project:

- **Microsoft Excel**: Data exploration and preprocessing
- **MYSQL**: Data Cleaning And Modeling
- **Power BI**: Data visualization and dashboard development

## 6. Milestones & Deadlines

- i. Data Collection (Week 1) 07/03/2026
- ii. Data Cleaning (Week 2) 14/03/2026
- iii. Data Modeling (Week 3) 21/03/2026
- iv. Data Calculation (Week 4) 28/03/2026
- v. Data Virtualization (Week 5) 04/04/2026
- vi. Final Report (Week 6) 11/04/2026

إن شاء الله

## 7. KPIs

- Total Job Postings
- Total Companies Hiring
- Remote Jobs %
- Maximum Salary Offered
- Minimum Salary Offered
- Average Salary by Job Title
- Average Employees per Company
- Top Companies by Job Postings
- Top Hiring Industries
- Jobs per Industry
- Companies per Industry
- Most In-Demand Skills
